HL

MEMORANDUM FOR CHAIRMAN, COMMITTEE ON IMAGERY
REQUIREMENTS AND EXPLOITATION

SUBJECT: Search Satisfaction

REFERENCE: COMIREX M-74, 26 June 1969

In response to the request contained in paragraph 9 of the above reference and confirming the information furnished by telephone, the search satisfaction from a vehicle flown at 85 nautical miles and using ultra-thin-base film may be considered almost identical to the satisfaction achieved by a vehicle flown at 100 nautical miles using standard-thin-base film.

This office is just completing a detailed study of search satisfaction in coordination with the CORONA Program Office. The study will be available next week and you will be briefed on the parameters considered in the assumptions made in reaching the satisfaction figures.
